Principles

Double break snap-action switch with electrically separated circuits and with positive opening action on NC contacts (21-22) according to IEC 60947-5-1 Annex K

Changeover - SPDT (form Zb)

Both circuits can be used at opposite polarities

Curves

Operating curve for category AC15 Operating curve for category DC13

- 1 Number of operations
- 2 Current in Amps

** For IP67 versions used in 125 V~, please consult us.

* Models 83254 and 83255 are designed to operate equally well on low-current (1 mA 4 V minimum recommended) or medium current circuits. However, a given product should only be used to switch one type of circuit during its working life.

Installation recommendations

See "Basic technical concepts".

To observe the required clearances and creepage distances in the connection area :

- above 125 V: an insulating plate is needed when the switch is mounted on an uninsulated surface.
- above 250 V: insulating plates are needed between switches when ganging.
